

Project Overview

In this project, you will analyze a dataset and then communicate your findings about it. You will use the Python libraries NumPy, pandas, and Matplotlib to make your analysis easier.

What do I need to install?

You will need an installation of Python, plus the following libraries:

- * pandas
- * NumPy
- * Matplotlib
- * csv

We recommend installing [Anaconda](#), which comes with all of the necessary packages, as well as IPython notebook. You can find installation instructions [here](#).

Why this Project?
